## Tooth Whitening

Brightens using a gentle whitening gel which releases active oxygen into dentine and enamel.

## Lip Enhancement

Injection treatment for smoothing lines and wrinkles around the mouth, plumping thin lips or improving lip contours.

## Cosmetic Facial Treatment

Improve the appearance of eyes, skin and mouth using facial fillers and wrinkle smoothing injections, all carried out by Chris Bird, an experienced principal dental surgeon at this practice.

## Dental Implants

These secure, permanent replacement teeth look and feel natural and are a comfortable alternative to missing teeth, also used to stabilise dentures providing greater comfort and confidence for the wearer.

## White Fillings

We use white fillings more commonly now for back teeth as well as those at the front of the mouth. Modern materials are much stronger and are virtually invisible.

## Crowns and Bridges

We offer the very latest in technologically advanced crowns and bridges providing the very best cosmetic results.

## Veneers

A thin layer of porcelain/composite is made to fit over the front surface of a tooth, rather like a false fingernail. Veneers can improve the colour, shape and position of teeth achieving that 'Hollywood' smile.

## Oral hygiene

We can provide care and the best advice on how to look after your teeth and gums.

## Dental Care Plan

Our own membership scheme offers high-quality care at an affordable price.

## Consultations

Arrange a free, informal chat with one of our helpful, friendly dental nurses or for more information, book a consultation with one of our dentists.
